Why choose CONIPAVE Rubber Aggregate?

Because it is so versatile - it is ideal for pedestrian, bicycle and equestrian traffic on pathways and rural trails.

Importantly, it supports wheelchair users, prams and buggies, which is a requirement for most public areas.

Composed of black rubber granules and a variety of decorative aggregates, the permeable surface is bound with a specially formulated moisture curing polyurethane binder - giving good grip and resilience.

When constructed on a suitable base, CONIPAVE RA is fully porous and meets the requirements for SUDS (Sustainable Urban Drainage Solutions).

The benefits of choosing CONIPAVE RA permeable paving are:

- ✓ Outstanding water permeability reduces the risk of flooding
- ✓ Reduces or eliminates planning requirements
- ✓ Low maintenance and easy to install
- ✓ Utilises recycled components
- ✓ Flexible, slip resistant surface
- ✓ Decorative, with bespoke finishes available
